

DSWD DROMIC Report #4 on Tropical Storm “Paeng” as of 27 October 2022, 6PM

I. Situation Overview

Issued on 27 October 2022 at 5 PM, “PAENG” maintains its strength while moving slowly Southwestward.

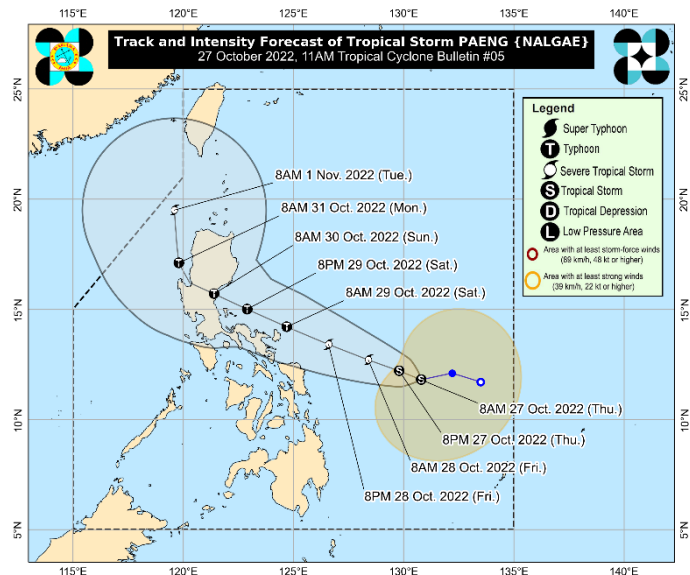

Hazards affecting Land Areas

Heavy Rainfall:

- Tomorrow early morning through evening: Moderate to heavy with at times intense rains likely over Bicol Region, Eastern Visayas. Light to moderate with at times heavy rains possible over MIMAROPA, BARMM, Zamboanga Peninsula, Northern Mindanao, Caraga, Quezon, Cagayan, Isabela, Apayao, Aurora, and the rest of Visayas.
- Tomorrow evening through Saturday: Heavy to torrential rains possible over Bicol Region, Northern Samar, Marinduque, and Quezon. Moderate to heavy with at times intense rains possible over Metro Manila, Western Visayas, Aurora, Bulacan, Mindoro Provinces, Romblon, the eastern portions of Cagayan and Isabela, and the rest of Eastern Visayas and CALABARZON. Light to moderate with at times heavy rains possible over Cordillera Administrative Region, Zamboanga Peninsula, BARMM, and the rest of Visayas, Cagayan Valley, Central Luzon, and MIMAROPA.
- Under these conditions, flooding and rain-induced landslides are expected, especially in areas that are highly or very highly susceptible to these hazard as identified in hazard maps and in localities with significant antecedent rainfall.
- Heavy rain areas may be updated in the succeeding bulletins should there be significant shifts in the track and intensity forecast of PAENG.
- Due to the Shear Line and the trough of PAENG, heavy rains are possible over Visayas, most of Southern Luzon, and the northern portion of Mindanao. For more information, refer to the 24-Hour Public Weather Forecast issued at 4:00 PM today and Weather Advisory #4 issued at 11:00 AM today.

Severe Winds:

- Strong winds may be experienced within any of the areas where Tropical Cyclone Wind Signal (TCWS) No. 1 is hoisted throughout the entire passage of PAENG. Per latest track and intensity forecast, the highest wind signal that will likely be hoisted is Wind Signal No. 4, in anticipation of typhoon-force conditions associated with PAENG.
- In the next 24 hours, the surge of the Northeast Monsoon will also bring strong winds with gusts reaching gale-force strength over Batanes, Babuyan Islands, Quezon, Bicol Region, Marinduque, Romblon, and the northern portions of mainland Cagayan, Apayao, and Ilocos Norte.
- There is minimal to moderate risk of storm surge of up to 2.0 m in height which may cause flooding in the low-lying coastal areas of Catanduanes and in some coastal areas of Camarines Sur. For more information refer to Storm Surge Watch #1 issued at 2:00 PM today.

Hazards affecting Coastal Waters

- Under the influence of the surge of the Northeast Monsoon, a marine gale warning is in effect over the seaboard of Northern Luzon and the eastern seaboard of Central Luzon, Southern Luzon, and Visayas. For more information, refer to Gale Warning #9 issued at 5:00 PM today.
- In the next 24 hours, the combined effects of the surge of the Northeast Monsoon and the approaching tropical cyclone may also bring moderate to rough seas (1.5 to 3.5 m) over the eastern seaboard of Mindanao. These conditions may be risky for those using small seacrafts. Mariners are advised to take precautionary measures when venturing out to sea and, if possible, avoid navigating in these conditions.

Track and Intensity Outlook

- Tropical Storm PAENG will move southwestward or west southwestward within 6 hours before turning generally west northwestward over the Philippine Sea through Sunday while moving towards central or southern portion of Luzon. On the forecast track, PAENG may pass close to Catanduanes on Saturday and a landfall scenario is possible on Sunday in the eastern coast of Aurora or Quezon. Considering the southward shift in the forecast track, a possible landfall in the eastern portion of Bicol Region is not ruled out at this time.
- PAENG is forecast to further intensify while moving over warm waters of the Philippine Sea. It is forecast to reach severe tropical storm category within 24 hours and may intensify into a typhoon by Saturday. The occurrence of rapid intensification in the next 72 hours is not ruled out.

The center of Tropical Storm “PAENG” was estimated based on all available data at 510 km East of Borongan City, Eastern Samar (11.7°N, 130.1°E) while moving Southwestward slowly.
