

DSWD DROMIC Report #65 on the Effects of LPAs, Northeast Monsoon, and Shear Line as of 30 May 2023, 6PM

I. Situation Overview

On January 2023, various weather systems particularly Northeast Monsoon, Low Pressure Areas (LPAs), and Shear Line affected the country. According to the Philippine Atmospheric, Geophysical and Astronomical Services Administration (PAGASA), the effects of these weather systems varied daily in different areas.

On 21 March 2023, PAGASA officially published their press release on the termination of the Northeast Monsoon and reported that their recent analyses indicate a retreat of the High-Pressure Area over Siberia, which resulted in the weakening of northeasterly winds and an increase in the air temperature over most parts of the country. Furthermore, the strengthening of the North Pacific High has led to a gradual shift in the wind pattern from northeasterly to easterly. These signify the end of the Northeast Monsoon (Amihan) and the beginning of the warm and dry season, which is expected to last until May 2023.
