

DSWD DROMIC Report #5 on STY “Betty” (Mawar) as of 29 May 2023, 6PM

I. Situation Overview

Issued on 29 May 2023 at 5PM, Typhoon “Betty” continues to decelerate as it moves North Northwestward over the waters of Cagayan.

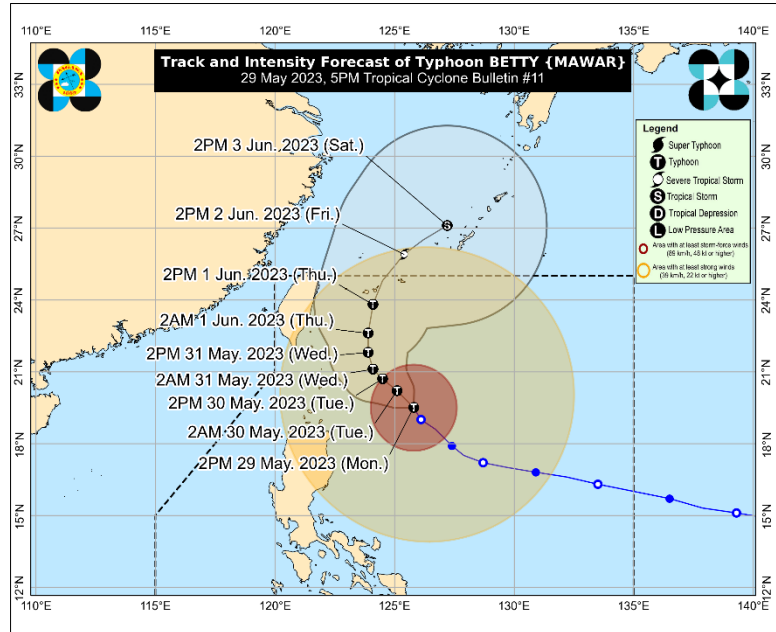

HAZARDS AFFECTING LAND AREAS

Heavy Rainfall Outlook

- Forecast accumulated rainfall from today to tomorrow afternoon
 - 50-100 mm: Batanes, eastern portion of Babuyan Islands, Ilocos Norte, northern portion of Ilocos Sur, northern portion of Apayao and the northeastern portion of mainland Cagayan
- Forecast accumulated rainfall from tomorrow afternoon to Wednesday afternoon
 - 100-200 mm: Ilocos Norte, Ilocos Sur, La Union, Abra, Benguet, Batanes and the eastern portion of Babuyan Islands
 - 50-100 mm: The rest of Babuyan Islands, Apayao, and the northern portion of mainland Cagayan
- Forecast accumulated rainfall from Wednesday afternoon to Thursday afternoon
 - 100-200 mm: Batanes, Ilocos Sur, La Union, and the western portions of Abra and Benguet
 - 50-100 mm: Babuyan Islands, the rest of Ilocos Region, Abra, and the rest of Abra and Benguet
- Forecast accumulated rainfall from Thursday afternoon to Friday afternoon
 - 50-100 mm: Batanes, Babuyan Islands, and Ilocos Region

Under these conditions, flooding and rain-induced landslides are likely, especially in areas that are highly or very highly susceptible to these hazard as identified in hazard maps and in localities that experienced considerable amounts of rainfall for the past several days.

Due to the Southwest Monsoon, occasional to monsoon rains over the western portions of Southern Luzon and Visayas. For more information, refer to the 24-Hour Public Weather Forecast issued at 4:00 PM today and Weather Advisory #1 for Southwest Monsoon issued at 11:00 AM today.

Severe Winds

- Minor to moderate impacts caused by gale-force winds are likely within the areas where Wind Signal No. 2 is hoisted. Minimal to minor impacts from strong winds (i.e., strong breeze to near gale strength) are possible within any of the areas where Wind Signal No.1 is currently in effect.
- Occasional gusts are possible in the next 24 hours due to the Southwest Monsoon over localities in the eastern portion of Central Luzon, eastern and southern portions of Southern Luzon that are not under any Wind Signal, and most of Visayas. Such conditions are more likely in coastal and exposed upland/mountainous areas. The western portion of Luzon may experience similar conditions beginning tomorrow or Wednesday.

HAZARDS AFFECTING COASTAL WATERS

- Under the influence of BETTY, a marine gale warning remains in effect over the northern and eastern seaboard of Northern Luzon, eastern seaboard of Central Luzon, the eastern and southern seaboard of Southern Luzon, the eastern and western seaboard of Visayas, and the eastern seaboard of Mindanao. For more information, refer to Gale Warning #5 issued at 5:00 PM today.

TRACK AND INTENSITY OUTLOOK

- On the track forecast, BETTY will move generally northwestward slowly today and may become slow-moving or almost stationary from tomorrow to Wednesday while over the waters east of Batanes. Afterwards, the typhoon will turn north northeastward or northeastward on late Wednesday or Thursday and gradually accelerate towards the waters east of Taiwan and the southern portion of Ryukyu Islands. BETTY may exit the Philippine Area of Responsibility (PAR) on Friday.
- This typhoon is forecast to steadily weaken over the next five days due to cooler ocean waters (caused by upwelling of cooler waters in its wake) and dry air intrusion. BETTY may be downgraded into a severe tropical storm on late Thursday or early Friday and into a tropical storm on late Friday or early Saturday.

The center of the eye of Typhoon BETTY was estimated based on all available data at 445 km East of Calayan, Cagayan (19.5 °N, 125.7 °E) moving North Northwestward at 10 km/h with maximum sustained winds of 155 km/h near the center and gustiness of up to 190 km/h.
