

DSWD DROMIC Report #6 on STY “Betty” (Mawar) as of 30 May 2023, 6PM

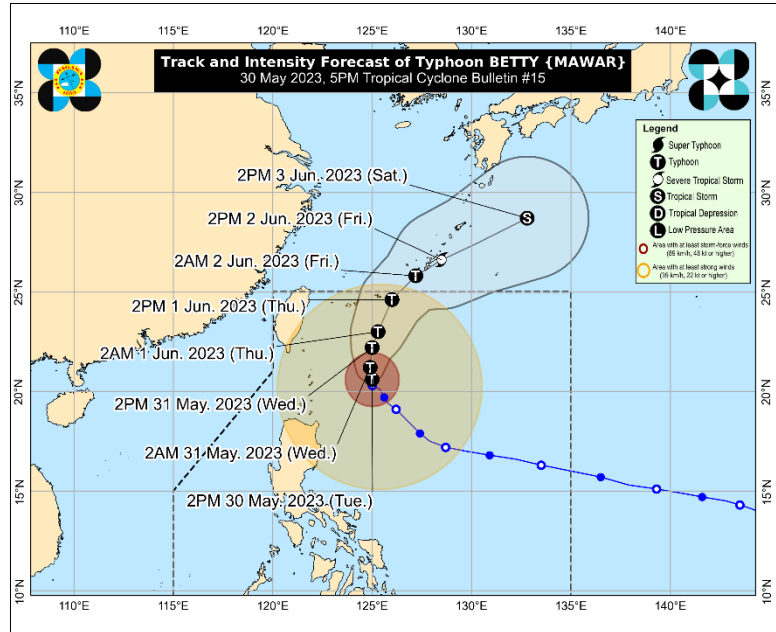

I. Situation Overview

Issued on 30 May 2023 at 5PM, Typhoon “Betty” decelerates while slowly moving Northward over the sea East of Batanes.

HAZARDS AFFECTING LAND AREAS

Heavy Rainfall Outlook

- Forecast accumulated rainfall from today to tomorrow afternoon
 - 50-100 mm: Batanes, Babuyan Islands, Ilocos Norte, Ilocos Sur, La Union, and the western portions of Abra and Benguet.

Under these conditions, flooding and rain-induced landslides are possible, especially in areas that are highly or very highly susceptible to these hazard as identified in hazard maps and in localities that experienced considerable amounts of rainfall for the past several days.

For more information on the areas affected by rains from the Southwest Monsoon enhanced by BETTY, refer to the Weather Advisory #3 for Southwest Monsoon issued at 11:00 AM today and the 24-Hour Public Weather Forecast at 4:00 PM today.

Severe Winds

- Wind Signals in some areas of Luzon have been downgraded.
- Minor to moderate impacts caused by gale-force winds remain possible within the areas where Wind Signal No. 2 is hoisted. Minimal to minor impacts from strong winds (i.e., strong breeze to near gale strength) are also possible within any of the areas where Wind Signal No.1 is currently in effect.
- The enhanced Southwest Monsoon and outer periphery of the typhoon circulation will also bring occasional gusts in the next 24 hours over Bicol Region, Western Visayas, Aurora, Quezon, Mindoro Provinces, Marinduque, Romblon, Northern Samar, and the rest of Cordillera Administrative Region and Ilocos Norte that are not under any Wind Signal.

HAZARDS AFFECTING COASTAL WATERS

- Under the influence of Typhoon BETTY and the enhanced Southwest Monsoon, a marine gale warning remains in effect over the seaboard of Northern Luzon, eastern seaboard of Central Luzon, Southern Luzon, and Visayas. For more information, refer to Gale Warning #7 issued at 5:00 PM today.

TRACK AND INTENSITY OUTLOOK

- Typhoon BETTY is forecast to generally move slowly northward today until tomorrow over the waters east of Batanes. Afterwards, the typhoon will gradually accelerate north northeastward on Thursday and northeastward on Friday, bringing its center over the waters southeast of the Ryukyu Islands. Typhoon BETTY may exit the Philippine Area of Responsibility on late Thursday or Friday early morning.
- This typhoon is forecast to steadily weaken over the next five days due to cooler ocean waters (caused by upwelling of cooler waters in its wake), dry air intrusion, and increasing vertical wind shear. BETTY may be downgraded into a severe tropical storm on late Thursday or early Friday and into a tropical storm on late Friday or early Saturday. However, given the extent of the effect of dry air intrusion on the typhoon, a faster weakening rate within the forecast period is not ruled out.

The center of the eye of Typhoon BETTY was estimated based on all available data at 315 km East of Basco, Batanes (20.6°N, 125.0°E) moving Northward Slowly with maximum sustained winds of 150 km/h near the center and gustiness of up to 185 km/h.
