

DSWD DROMIC Report #1 on the Effects of Hog Cholera in Bago City, Negros Occidental

as of 11 June 2023, 6PM

I. Situation Overview

On 31 May 2023, the Bago City Disaster Risk Reduction and Management Council (CDRRMC) in coordination with the City Veterinary Office (CVO) and the City Social Welfare and Development Office (CSWDO) confirmed swine deaths mainly due to hog cholera which affected the livelihood of hog raisers in the municipality.

Classical swine fever (CSF), also known as hog cholera, is a contagious viral disease of domestic and wild swine. It is caused by a virus of the genus Pestivirus of the family Flaviviridae. The most common method of transmission is through direct contact between healthy swine and those infected with CSF virus. CSF virus can survive in pork and processed pork products for months when meat is refrigerated and for years when it is frozen. Pigs can become infected by eating CSF-infected pork meat or products.
