

DSWD DROMIC Report #4 on Super Typhoon “Goring” as of 29 August 2023, 6PM

I. Situation Overview

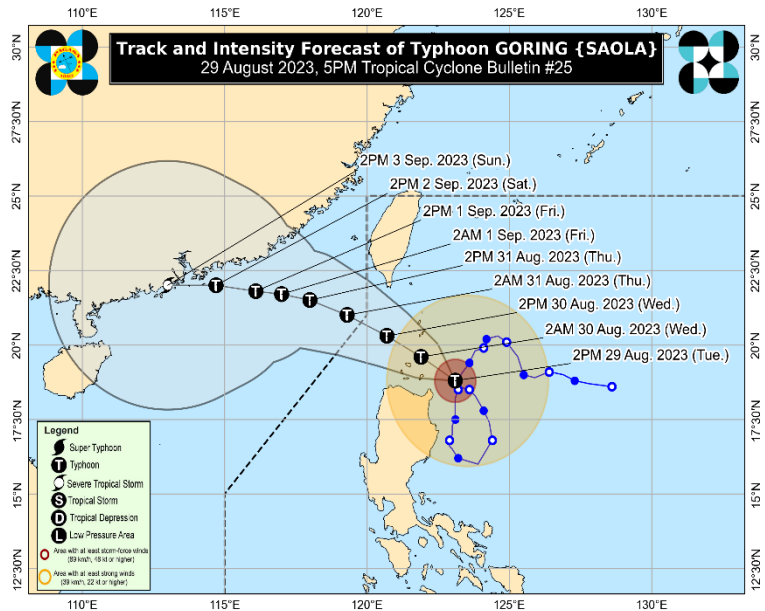

Issued on 29 August 2023 at 5PM, Typhoon “Goring” slightly intensifies while moving West Northwestward.

HAZARDS AFFECTING LAND AREAS

Heavy Rainfall

Forecast accumulated rainfall from today to tomorrow afternoon

- 100-200 mm: Babuyan Islands
- 50-100 mm: Batanes, Ilocos Norte, the northern portion of Abra, Apayao, and the northern and eastern portions of mainland Cagayan.

Forecast accumulated rainfall from tomorrow afternoon to Thursday afternoon

- Greater than 200 mm: Batanes and Babuyan Islands
- 100-200 mm: The northern portion of Ilocos Norte and the northwestern portion of Cagayan
- 50-100 mm: Apayao, Abra, the northern portion of Ilocos Sur, the northeastern portion of mainland Cagayan, and the rest of Ilocos Norte

Forecast rainfall are generally higher in elevated or mountainous areas. Under these conditions, flooding and rain-induced landslides are still expected especially in areas that are highly or very highly susceptible to these hazards as identified in hazard maps and in localities that experienced considerable amounts of rainfall for the past several days

The enhanced Southwest Monsoon will also bring occasional or monsoon rains over the western portions of Central Luzon, Southern Luzon, and Visayas over the next three days. For more information, refer to Weather Advisory #10 for Southwest Monsoon issued at 11:00 AM today and 24-Hour Public Weather Forecast and Outlook at 4:00 PM today.

Severe Winds

The wind signals warn the public of the general wind threat over an area due to the tropical cyclone. Local winds may be slightly stronger/enhanced in coastal and

upland/mountainous areas exposed to winds. Winds are less strong in areas sheltered from the prevailing wind direction.

- Significant to severe impacts from typhoon-force winds are possible within any areas where Wind Signal No. 4 is hoisted.
- Moderate to significant impacts from storm-force winds are possible within any of the areas where Wind Signal No. 3 is hoisted.
- Minor to moderate impacts from gale-force winds are possible within any of the areas under Wind Signal No. 2
- Minimal to minor impacts from strong winds are also possible within any of the areas under Wind Signal No. 1.

Wind Signal No. 5 is the highest possible warning level due to severe winds that may be hoisted by PAGASA over Extreme Northern Luzon

The enhanced Southwest Monsoon will continue to bring gusty conditions over the following areas not under any Wind Signal, especially in coastal and upland/mountainous areas exposed to winds:

- Today: Aurora, Bataan, Bulacan, Metro Manila, CALABARZON, MIMAROPA, Bicol Region, Visayas, Dinagat Islands, Camiguin, and most of Zamboanga Peninsula.
- Tomorrow: Ilocos Region, Zambales, Bataan, Bulacan, Aurora, Metro Manila, CALABARZON, MIMAROPA, Bicol Region, and Visayas.
- Wednesday: Ilocos Region, Cordillera Administrative Region, Zambales, Bataan, Bulacan, Aurora, Metro Manila, CALABARZON, MIMAROPA, Bicol Region, and Western Visayas.

HAZARDS AFFECTING COASTAL WATERS

A Gale Warning is in effect for the seaboard of Luzon, seaboard of Visayas, and the northern seaboard of Mindanao. Disruption in civilian maritime activities is expected over these areas (e.g., suspension of sea travel) due to hazardous sea condition. For more information, refer to Gale Warning #12 issued at 5:00 PM today.

TRACK AND INTENSITY OUTLOOK

- “Goring” is forecast to follow a mainly northwestward or west northwestward path across the Luzon Strait from today until it exits the Philippine Area of Responsibility (PAR) tomorrow evening or Thursday morning. The latest track forecast indicates that the typhoon may pass very close or make landfall in the vicinity of Babuyan Island between tonight or tomorrow early morning (although a slight northward shift in the track forecast may bring the eye and eyewall region of the typhoon to the southern portion of Batanes). During this period, the typhoon is forecast to persist in strength by the time it passes very close or over Batanes (although gradual re-intensifying and reaching into a super typhoon category is not ruled out).
- Outside the PAR region, the typhoon will continue its west northwestward movement for the remainder of Thursday before turning more westward by Friday, increasingly unfavorable conditions over the waters southeast of mainland China will trigger a weakening trend. By the time “Goring” may make landfall in the vicinity

of southeastern China (near Hong Kong/Pearl River Delta area) on Sunday, it will have weakened to minimal typhoon strength.

The center of the eye of Typhoon “Goring” was estimated based on all available data at 165 km East of Calayan, Cagayan (19.1 °N, 123.0 °E) moving West Northwestward at 10 km/h with maximum sustained winds of 165 km/h near the center and gustiness of up to 205 km/h.
