

DSWD DROMIC Report #7 on the Effects of Hog Cholera in Negros Occidental

as of 14 December 2023, 6PM

I. Situation Overview

On 27 April 2023, the Province of Negros Occidental confirmed the widespread swine deaths caused by Hog Cholera, African Swine Fever (ASF) and even Bird Flu within the province. Hence, the concerned LGUs were highly encouraged to strengthen their respective animal biosecurity measures within their respective areas of responsibility (AOR) in coordination with the Veterinary Health Office (VHO).

On 31 May 2023, the Bago City Disaster Risk Reduction and Management Council (CDRRMC) in coordination with the City Veterinary Office (CVO) and the City Social Welfare and Development Office (CSWDO) confirmed swine deaths mainly due to hog cholera which affected the livelihood of hog raisers in the municipality. Cases of swine deaths caused by Hog Cholera were also confirmed in San Enrique, Negros Occidental.

Classical swine fever (CSF), also known as hog cholera, is a contagious viral disease of domestic and wild swine. It is caused by a virus of the genus Pestivirus of the family Flaviviridae. The most common method of transmission is through direct contact between healthy swine and those infected with CSF virus. CSF virus can survive in pork and processed pork products for months when meat is refrigerated and for years when it is frozen. Pigs can become infected by eating CSF-infected pork meat or products.
