

## DSWD DROMIC Report #3 on Typhoon “Jenny” as of 04 October 2023, 6PM

### I. Situation Overview

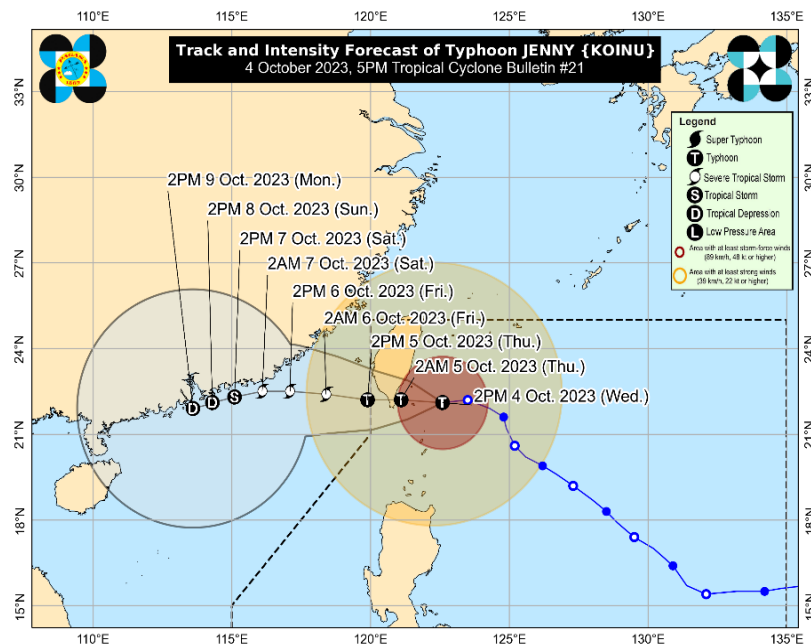

Issued on 04 October 2023 at 5PM, “Jenny” slightly intensifies as it moves Westward towards Southern Taiwan.

#### HAZARDS AFFECTING LAND AREAS

##### Heavy Rainfall Outlook

Forecast accumulated rainfall from today to tomorrow noon:

- 100-200 mm: Batanes
- 50-100 mm: The northern portion of Babuyan Islands

Forecast accumulated rainfall from tomorrow afternoon to Friday afternoon:

- 50-100 mm: Batanes and northern portion of Babuyan Islands

Forecast rainfall are generally higher in elevated or mountainous areas. Under these conditions, flooding and rain induced landslides are possible especially in areas that are highly or very highly susceptible to these hazards as identified in hazard maps and in localities that experienced considerable amounts of rainfall for the past several days

In addition, “Jenny” will continue to enhance the Southwest Monsoon and bring occasional rains over the western portions of Luzon in the next 3 days. For more information, refer to Weather Advisory No. 8 for Southwest Monsoon issued at 11AM today and 24-Hour Public Weather Forecast and Outlook at 4PM today.

##### Severe Winds

The wind signals warn the public of the general wind threat over an area due to the tropical cyclone. Local winds may be slightly stronger/enhanced in coastal and upland/mountainous areas exposed to winds. Winds are less strong in areas sheltered from the prevailing wind direction.

- Moderate to significant impacts from storm-force winds may be observed within any of the areas under Wind Signal No. 3
- Minor to moderate impacts from gale-force winds are possible within any of the areas under Wind Signal No. 2.

- Minimal to minor impacts from strong winds are possible within any of the areas under Wind Signal No. 1.  
The enhancement of the Southwest Monsoon by “Jenny” will bring gusty conditions for the next 3 days over the following areas not under any Wind Signal, especially in coastal and upland/mountainous areas exposed to winds:
- Today: The southern portion of Aurora, Bataan, Metro Manila, Occidental Mindoro, Kalayaan Islands, Romblon, most of CALABARZON, and portions of Bicol Region.
- Tomorrow: The southern portion of Aurora, Romblon, and portions of CALABARZON and Bicol Region.

**HAZARDS AFFECTING COASTAL WATERS**

- Under the influence of “Jenny”, a Gale Warning is in effect for the coastal waters along the seaboard of Northern Luzon. For more information, refer to Gale Warning No. 7 issued at 5:00 PM today.
- In the next 24 hours, “Jenny” will also bring moderate to rough seas (1.5 to 3.0 m) over the coastal waters of northern Aurora. Mariners of motor bancas and similarly-sized vessels are advised to take precautionary measures while venturing out to sea and, if possible, avoid navigating in these conditions, especially if inexperienced or operating ill-equipped vessels.

**TRACK AND INTENSITY OUTLOOK**

- “Jenny” is forecast to move generally westward for the remainder of the forecast period. On the track forecast, the typhoon will make landfall over the southern portion of Taiwan tomorrow morning, then exit the Philippine Area of Responsibility (PAR) tomorrow afternoon or evening. Outside the PAR region, “Jenny” will continue to move westward slowly over the Taiwan Strait and the coastal waters of southeastern China
- The weakening trend is forecast to continue due to the increasing dry air entrainment and vertical wind shear. Land interaction during its passage over the rugged terrain of southern Taiwan will further weaken the typhoon. Once over the Taiwan Strait, additional cool dry air from the north will entrain into “Jenny”, resulting in continued weakening

The center of the eye of Typhoon “Jenny” was estimated based on all available data at 155 km North Northeast of Itbayat, Batanes (22.1°N, 122.4°E) moving North Westward at 10 km/h with maximum sustained winds of 155 km/h near the center and gustiness of up to 190 km/h.
