

## DSWD DROMIC Report #4 on the Effects of Southwest Monsoon and Typhoon “Jenny” as of 05 October 2023, 6PM

### I. Situation Overview

Issued on 05 October 2023 at 5PM, “Jenny” further weakens and is now outside the Philippine Area of Responsibility (PAR).

#### HAZARDS AFFECTING LAND AREAS

##### Heavy Rainfall Outlook

Forecast accumulated rainfall from today to tomorrow afternoon:

- 100-200 mm: Batanes

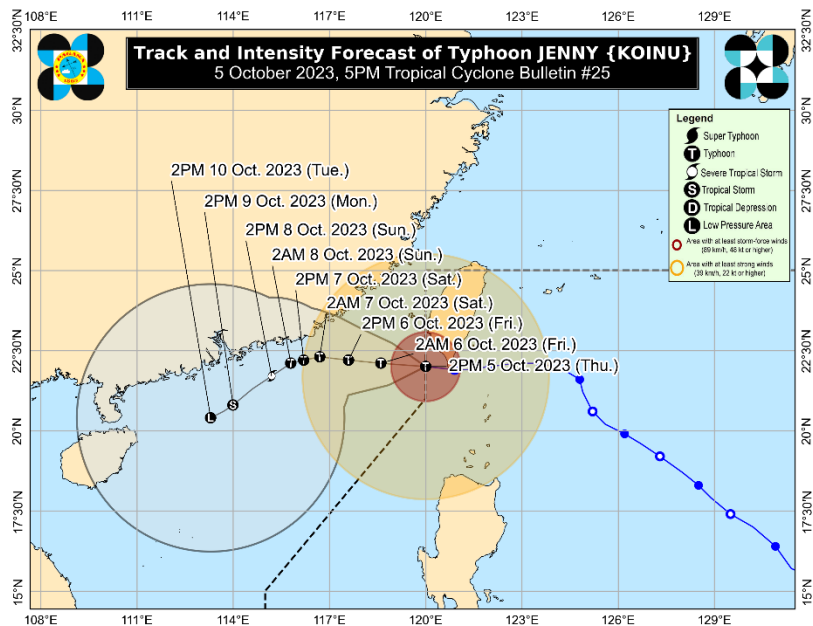

Forecast rainfall are generally higher in elevated or mountainous areas. Under these conditions, flooding and rain-induced landslides are possible especially in areas that are highly or very highly susceptible to these hazards as identified in hazard maps and in localities that experienced considerable amounts of rainfall for the past several days.

In addition, “Jenny” will continue to enhance the Southwest Monsoon and bring light to moderate rains over the western portions of Luzon. For more information, refer to 24-Hour Public Weather Forecast and Outlook at 4PM today.

##### Severe Winds

The wind signals warn the public of the general wind threat over an area due to the tropical cyclone. Local winds may be slightly stronger/enhanced in coastal and upland/mountainous areas exposed to winds. Winds are less strong in areas sheltered from the prevailing wind direction.

- Minor to moderate impacts from gale-force winds are possible within any of the areas under Wind Signal No. 2.
- Minimal to minor impacts from strong winds are possible within any of the areas under Wind Signal No. 1.

The enhancement of the Southwest Monsoon by “Jenny” will bring gusty conditions for the next 3 days over the following areas not under any Wind Signal, especially in coastal and upland/mountainous areas exposed to winds:

Today: The southern portion of Aurora, Romblon, and portions of CALABARZON, Metro Manila, Bataan, and Bicol Region.

### HAZARDS AFFECTING COASTAL WATERS

Under the influence of “Jenny”, a Gale Warning is in effect for the coastal waters along the northern and western seaboard of Northern Luzon. For more information, refer to Gale Warning No. 9 issued at 5PM today.

### TRACK AND INTENSITY OUTLOOK

- Outside the PAR region, “Jenny” will continue to move westward (becoming west southwestward to southwestward by Sunday) slowly over the Taiwan Strait and the coastal waters of southeastern China.
- Once over the Taiwan Strait, additional cool dry air from the north will entrain into JENNY, resulting in continued weakening. “Jenny” may become a tropical depression by late Sunday.

The center of the eye was estimated based on all available data 275 km West Northwest of Itbayat, Batanes (outside PAR) (22.1°N, 119.6°E) moving Westward at 15 km/h maximum sustained winds of 140 km/h near the center and gustiness of up to 170 km/h.
