

DSWD DROMIC Report #14 on the Effects of Shear Line and Tropical Storm “Kabayan” as of 04 January 2024, 6PM

I. Situation Overview

Last December 2023, the Philippines experienced significant meteorological events, attributed between the interaction of Shear Line and Tropical Storm Kabayan with the following key development and effects:

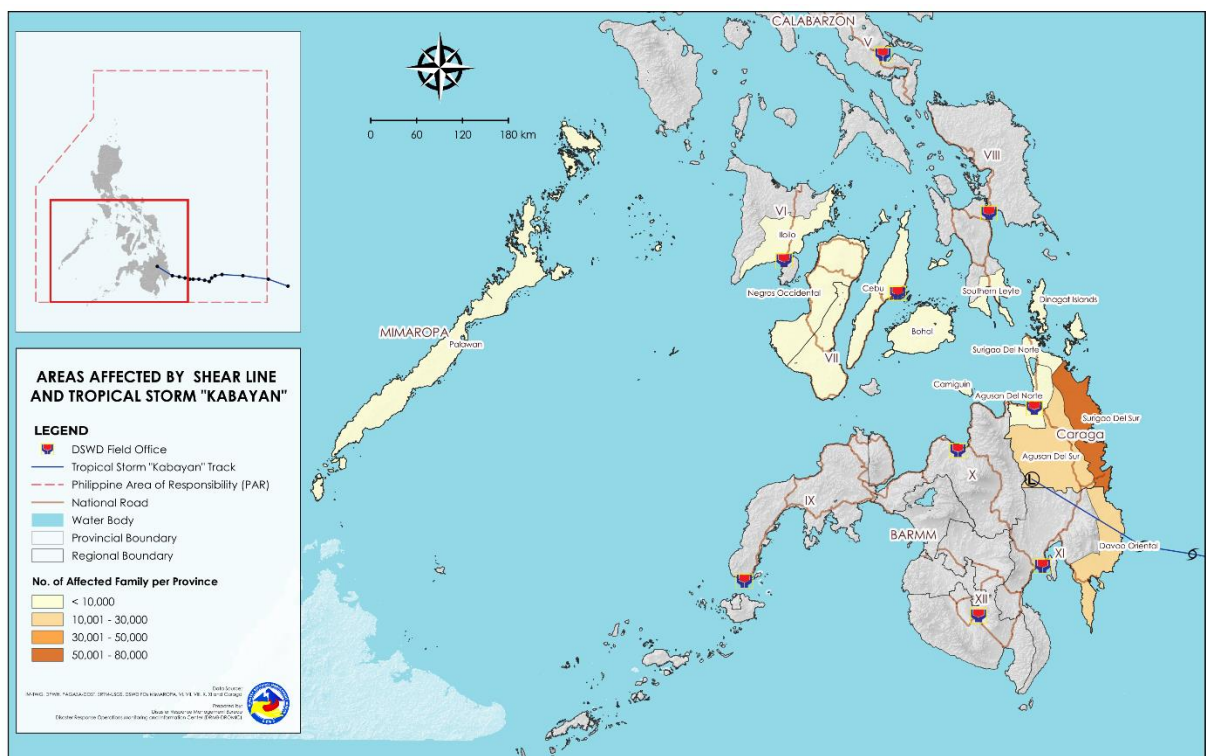

Gradually, on December 17, 2023, a Low Pressure Area (LPA) east of Surigao del Sur has evolved into Tropical Depression locally named as "Kabayan." By 11 PM on the same day, "Kabayan" intensified into a Tropical Storm.

On December 18, 2023, "Kabayan" weakened into a Tropical Depression and made landfall over Manay, Davao Oriental. Subsequently, by 2:30 PM, "Kabayan" further weakened into an LPA, and at 5 PM, it diminished into a Remnant Low.

On December 20, 2023, the LPA (formerly "Kabayan") located west of Puerto Princesa, Palawan, continued moving away. Exiting the Philippine Area of Responsibility (PAR) on December 21, 2023.

Relative with the passage of "Kabayan," the Shear Line brought substantial rainfall to various parts of the country. Resulted in significant effects on local weather conditions and varied impacts across different regions.
