

DSWD DROMIC Report #7 on Typhoon “AGHON” as of 27 May 2024, 6PM

I. Situation Overview

Issued on 27 May 2024 at 5PM, “AGHON” slightly shifted east northeastward while moving away from the Philippine landmass.

HAZARDS AFFECTING LAND AREAS

Heavy Rainfall Outlook

Typhoon AGHON is less likely to directly bring significant amount of rainfall within the next three days.

The Southwesterly Windflow enhanced by this typhoon will bring moderate to heavy rains over Western Visayas and portions of MIMAROPA in the next two days. The wind signals warn the public of the general wind threat over an area due to the tropical cyclone. Local winds may be slightly stronger/enhanced in coastal and upland/mountainous areas exposed to winds. Winds are less strong in areas sheltered from the prevailing wind direction.

Severe Winds

- The wind signals warn the public of the general wind threat over an area due to the tropical cyclone. Local winds may be slightly stronger/enhanced in coastal and upland/mountainous areas exposed to winds. Winds are less strong in areas sheltered from the prevailing wind direction.
- Minimal to minor impacts from strong winds are possible within any of the areas under Wind Signal No. 1.

HAZARDS AFFECTING COASTAL WATERS

Under the influence of AGHON, a Gale Warning is hoisted over the coastal waters of Cagayan (eastern portion), Isabela, Aurora, and the northern coastal waters of Quezon including Polillo Islands. Sea travel is risky for small seacrafts, including all motorbancas of any type of tonnage.

Outside the Gale Warning areas, AGHON will bring moderate to rough seas (1.5 to 3.0 m) over the eastern coastal waters of Cagayan and the northern coastal waters of Bicol Region. Mariners of motor bancas and similarly-sized vessels are advised to take precautionary measures while venturing out to sea and, if possible, avoid navigating in these conditions, especially if inexperienced or operating ill-equipped vessels.

TRACK AND INTENSITY OUTLOOK

On the track forecast, Typhoon AGHON will move generally northeastward over the Philippine Sea for the entirety of the forecast period. It may exit the Philippine Area of Responsibility (PAR) on Wednesday afternoon or evening as a typhoon.

AGHON will continue to intensify over the next 24 to 36 hours as it moves northeastward over the Philippine Sea. A weakening trend may begin on mid or late Wednesday as the typhoon begins interacting with the mid-latitude environment and undergo post-tropical transition.

The center of the eye of Typhoon “AGHON” was estimated based on all available data including those from Baler Doppler Weather Radar at 155 km East of Casiguran, Aurora (16.3 °N, 123.6 °E) moving North Northeastward at 10 km/h with a maximum sustained winds of 140 km/h near the center and gustiness of up to 170 km/h.
