

DSWD DROMIC Report #5 on Typhoon “Nika” and Typhoon "Ofel" as of 13 November 2024, 6AM

I. Situation Overview

Issued on 13 November 2024 at 5:00 AM, “Ofel” has further strengthened into a typhoon.

HAZARDS AFFECTING LAND AREAS

Heavy Rainfall Outlook

Refer to Weather Advisory No. 22 issued at 5:00 AM today for the heavy rainfall outlook due to Tropical Cyclone “OFEL”.

Severe Winds

The wind signals warn the public of the general wind threat over an area due to the tropical cyclone. Local winds may be slightly stronger/enhanced in coastal and upland/mountainous areas exposed to winds. Winds are less strong in areas sheltered from the prevailing wind direction.

- Minimal to minor impacts from strong winds are possible within any of the areas under Wind Signal No. 1.

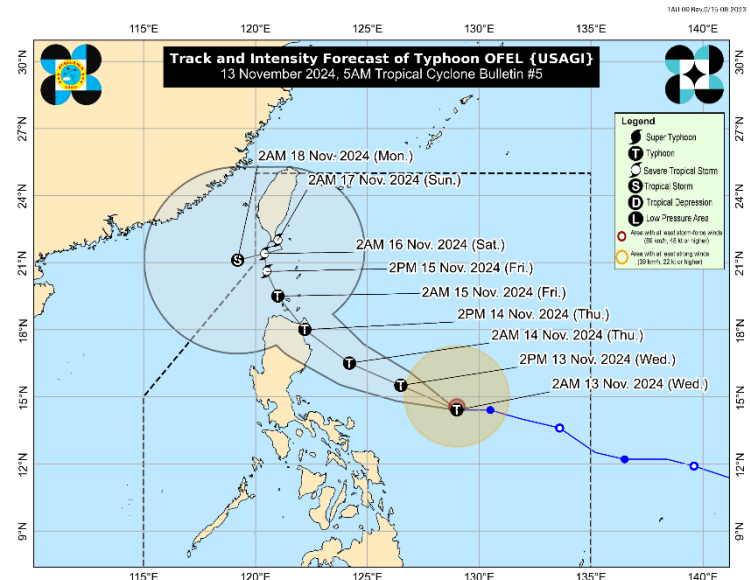

The highest Wind Signal which may be hoisted during the occurrence of OFEL is Wind Signal No. 4.

Furthermore, the wind flow coming towards the circulation of Typhoon OFEL will also bring strong to gale-force gusts over the following areas, especially in coastal and upland areas exposed to winds:

- Today (13 November): Camarines Norte, Camarines Sur, and Catanduanes
- Tomorrow (14 November): Camarines Norte and the eastern portion of Quezon including Polillo Islands
- Friday (15 November): The eastern portion of Isabela.

Coastal Inundation

There is a moderate to high risk of life-threatening storm surge reaching 2.0 to 3.0 m in the next 48 hours over the low-lying or exposed coastal localities of Batanes, Ilocos Norte, Ilocos Sur, Cagayan including Babuyan Islands, Isabela, and northern Aurora. Refer to Storm Surge Warning No. 3 issued at 2:00 AM today for the details.

HAZARDS AFFECTING COASTAL WATERS

A final Gale Warning was issued at 5:00 PM today.

24-Hour Sea Condition Outlook

Up to rough seas over the following coastal waters:

- Up to 3.5 m: The northern and eastern seaboard of Catanduanes
- Mariners of small seacrafts, including all types of motorbancas, are advised not to venture out to sea under these conditions, especially if inexperienced or operating ill-equipped vessels.

Up to moderate seas over the following coastal waters:

- Up to 2.5 m: The eastern seaboard of mainland Cagayan, Isabela, Aurora, Quezon, Albay, and Sorsogon; The seaboard of Camarines Norte; the northern seaboard of Camarines Sur; the remaining seaboard of Catanduanes; the northern and eastern seaboard of Northern Samar
- Up to 2.0 m: The remaining seaboard of Cagayan Valley; the seaboard of Ilocos Norte and Kalayaan Islands; the eastern seaboard of Eastern Samar
- Mariners of motorbancas and similarly-sized vessels are advised to take precautionary measures while venturing out to sea and, if possible, avoid navigation under these conditions.

TRACK AND INTENSITY OUTLOOK

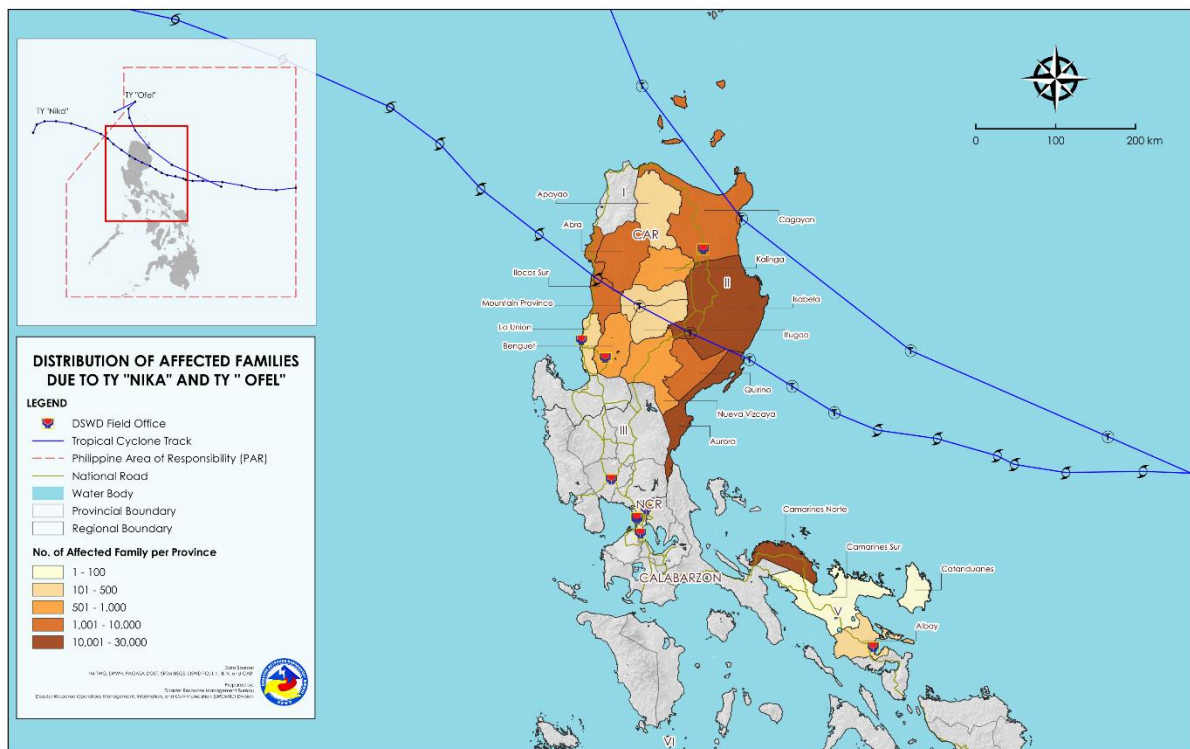

- OFEL is forecast to move west northwestward to northwestward over the Philippine Sea before making landfall along the east coast of Cagayan or Isabela tomorrow (14 November) afternoon. It will then emerge over the Luzon Strait on Friday (15 November) and turn more north northwestward while slowing down before behaving erratically during the weekend. Regardless of the position of the landfall point, it must be emphasized that hazards on land and coastal waters may still be experienced in areas outside the landfall point or forecast confidence cone.
- It must also be emphasized that the track may still shift within the limit of the forecast confidence cone, especially on the 4th and 5th day of the forecast track. In particular, two scenarios are emerging: a west northwestward track during the land crossing that is further south of the present scenario and a recurving track to the right of the present forecast which will bring OFEL mainly offshore of Northern Luzon. Given these, further changes in the track forecast are expected.
- OFEL is forecast to steadily intensify within 24 hours and possibly make landfall during its peak intensity.

The center of the eye was estimated based on all available data 475 km East Northeast of Virac, Catanduanes or 595 km East of Daet, Camarines Norte (14.6 °N, 128.5 °E) while moving Westward at 25 km/h with maximum sustained winds of 120 km/h near the center and gustiness of up to 150 km/h.
